

Steel Frame Tents

Simple design in all weather conditions

With their **simple design and easy to assemble structure**, our steel frame tents are designed for **long-term camp set-ups**, with no power or specific tools required during their setup.

Our steel frame tents consist of a robust **galvanized steel frame** and a fabric cover that can be manufactured using two types of fabric:

- Breathable polycotton for hot weather environments
- PVC-coated polyester fabric, when a more durable finish is required

The walls and roof consist a unique piece of fabric that is mounted on top of the frame, and the groundsheet, which is made with PVC coated fabric for **optimal water-tightness**, can be assembled to the main cover by means of Velcro strips.

This type of tent has been designed for military use, but can also be used for various other applications, such as offices, dormitories, dining halls, medical facilities or guard huts.

Available Equipment:

- Lighting
- Insulation liner
- Flysheet
- Inner partitioning
- Sleeping cabins
- Rigid flooring
- HVAC
- Logos

Set up:

1 to 3 hours,
2 to 4 people

Load Resistance:

- Wind: 150 km/h
- Snow: 75 kg/m²

- Easy assembly
- Fully water-proof
- Ideal for long-term camp settings

We reserve the right to change specifications of products without prior notice
